

SolarNet™

Solar-powered 4G-LTE solution that provides functional, reliable asset tracking and monitoring.

With a 10-year battery life on solar power, SolarNet delivers consistent, uninterrupted service that business can rely on.

SolarNet features reliable and durable support with an integrated solar-powered tracking system. Designed for easy and flexible installations, mount on a trailer, container, railcar, or heavy equipment.

Optional built-in CargoV

- SolarNet with CargoV utilizes ultrasonic high-frequency sound for efficient object detection, remaining unaffected by visual attributes.
- By calculating the time of flight for transmitted sound, it accurately detects and localizes objects in diverse environments, ensuring precise and reliable results.

Solar benefits

- Solar powered, SolarNet offers long life with solar recharge with standby power of 180 days between charge.

Quick installation

- Data from a wide variety of external sensors are available through Bluetooth LE connections.
