Industry: Not-for-Profit Youth Agency
Based In: Las Vegas, NV
Type of Vehicles: Shuttle Buses, Work Trucks & Passenger Vans
Fleet Size: 22

The Challenge: Monitoring and Continuously Improving Safe Driving

When your fleet is responsible for transporting kids to and from places, driver safety and on-road behavior will be at the forefront of your priorities.

The Boys and Girls Clubs of Southern Nevada was unaware of the benefits that telematics systems could provide and started using Geotab simply out of curiosity. “The idea to use telematics was proposed to us, and we figured it might be useful to see what our 22 vehicles are actually doing out there,” Jacoby said.
Uncovering Driver Behavior

Jacoby said that the system is also a good way to get staff to understand the responsibilities they have to be good and attentive drivers. Once he informed the 150-person staff of the new tracking system, management immediately saw improvements in idling times and speeding.

“I think people tend to drive as they would with their own cars, but with the system in place it helps them realize that these are work vehicles,”

- Mark Jacoby, Area Director

The system has positively affected driver behavior, fuel economy, and has had an overall impact in understanding what the agency’s vehicles use looks like.

Unlike many fleets that have to filter through a few systems before they find one which meets their needs, Jacoby found Geotab right off the bat.

All 22 vehicles in the fleet are equipped with a GPS system. The fleet is comprised mostly of 15- and 20-passenger vehicles, but the agency also owns a few pickup trucks and trailers.

The agency has yet to receive a speeding ticket or get into an accident since telematics has been implemented.

In some cases driver reports provide a way to defend drivers from complaints. For example, Jacoby received a call about an accident involving one of his drivers. The driver insisted he wasn’t in an accident, and there had been no damage on the vehicle.
Whether it’s field trips to sporting events, amusement parks or even volunteer projects, the Boys and Girls Clubs of Southern Nevada spends 40 percent of its time doing activities outside their clubhouses. Because many of these activities take place on the weekends when the office is closed, Jacoby can monitor the vehicles to see how much mileage was put on.

“It’s a sophisticated system,” Jacoby said. “I would recommend it to anyone.”
