

# Data-driven technology for modern police departments

Protect your officers and vehicles with Geotab's police solution

T-Mobile Fleet Management from Geotab offers a solution for police fleets to help departments address key concerns like officer safety, efficiency and budget constraints using a single platform. With tools that enable supervisors to track detailed fleet information, departments can make more strategic decisions that promote safer, more efficient fleet operations. Rich fleet data collected using Geotab helps pinpoint areas of improvement and take action.

## Increase operational agility and protect your team with robust data

### Enhanced protection

Limit liability by having fleet data that adds crucial context to dash camera footage.

### Stronger accountability

Gain stronger visibility into your department's operations and increase transparency with customizable reports.

### Integration capabilities

Connect data from other third-party sources with fleet data for a holistic view of all operations in one place.

## What are your fire vehicles telling you?

### Real-time vehicle diagnostics

Extend vehicle life and keep officers safe with engine, battery, tire, suspension and maintenance status. Go beyond engine fault codes with the Geotab Measurements tool.

### Driver safety features

Track speeds, seat belt usage, cornering, harsh braking and hard accelerations. The collision reconstruction tool can assist police fleets by providing detailed and accurate analyses of incidents involving their vehicles. Police fleets can enhance their operational safety, reduce liabilities, and maintain a high standard of accountability.

### Fuel management

Reduce your department's carbon emissions and maximize budget funds. Track issues like vehicle idling and speeding while capturing fuel events and measurements in the MyGeotab dashboard.

## Why Geotab?

- Trusted by over 450 public safety teams who rely on our innovative solutions to effectively manage their fleet operations and provide better front line support.
- Advanced operational integrations, including with lights and siren activity trackers, gun rack status and temperature monitoring solutions.
- Engineering-led company with a keen focus on new research and development, with an annual R&D budget of approximately \$80 million.
- Highly secure platform that works to keep your data safe. With FedRAMP authorization, ISO/IEC 27001:2013 and FIPS 140-2 validation, Geotab meets the strictest cybersecurity needs of government customers and police departments.

### Build for the future with Geotab

Our technology solutions evolve with your operations. As new challenges emerge, Geotab's open platform and APIs help customize our solution to meet your needs. As we innovate, we prioritize bringing public safety leaders to the table. This enables us to build the most effective solutions for those serving their communities.

## Gain visibility into your fleet operations and respond to public safety incidents more efficiently than ever before.

### Geotab GO Device

- Plugs into onboard diagnostics (OBD) II port to read vehicle and engine data
- Easy installation

### MyGeotab

- Web-based fleet management dashboard
- Instant notification for critical alerts like collisions or critical engine fault codes
- Customizable with Software Development Kit

### IOX-AUXM

- Extend the GO device to lights, sirens, gun rack and more
- Data transfers automatically to MyGeotab

### Temperature monitoring

- Alerts for deviations beyond set thresholds integrated into MyGeotab
- Use for K9 specialist or people transport vehicles
