

Geotab Integrated Solution for Nissan vehicles

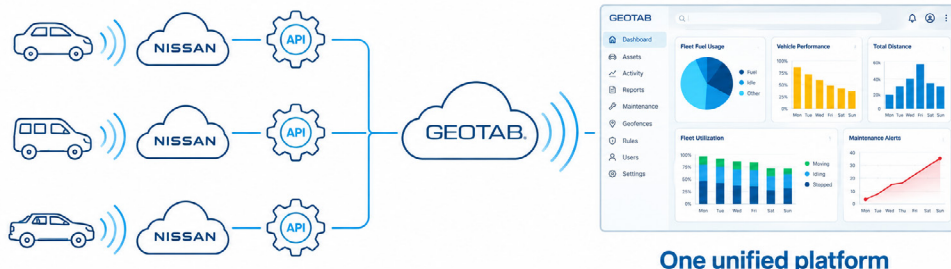

A new era of connected fleet management

Elevate your fleet management by leveraging deep insights for enhanced visibility and operational efficiency without hardware.

By leveraging OEM-embedded connectivity already built into supported Nissan¹ vehicles, fleet operators can access high-quality vehicle data directly within the MyGeotab™ platform — with no aftermarket hardware, no installation costs and no added complexity.

Activate eligible Nissan vehicles remotely. From the moment a vehicle is activated, vehicle data flows seamlessly into MyGeotab, giving fleet managers centralized visibility across their entire operation in one unified environment.

Key benefits:

Hardware-free activation

No install, no downtime, no device management. Activate eligible Nissan vehicles remotely and get your fleet connected faster and more cost-effectively than ever before.

EV-ready

For electric Nissan models, gain real-time visibility into state of charge and remaining range, empowering better route planning and energy management.

Core fleet visibility

GPS location, trip history, odometer, fuel readings and many more — all confirmed and available from day one.

One integrated platform

Nissan vehicle data flows natively into MyGeotab alongside data from the rest of your fleet. Manage mixed makes and mixed powertrains in one familiar environment.

Productivity

- Precise vehicle location tracking
- GPS data with sampling frequency of 5 minutes or less, and at every ignition On/Off
- Utilization insights from Trips and Activity reports
- Hardware-free remote activation — no install, no downtime, no device management

Operations

- Fuel usage tracking and low fuel alerts to measure and optimise fuel costs
- Access to SDK and APIs to develop custom applications suited to your business
- Centralised visibility across mixed makes and mixed powertrains in one unified platform

Sustainability

- Fleet autonomy and range efficiency tracking
- EV battery state of charge monitoring
- EV energy consumed reporting

Safety

- Tyre pressure readings
- Health alerts for ABS, brake fluid, and oil pressure — reported on change

Compliance

- Reporting of vehicle usage for personal and business purposes to support compliance requirements
